Visit M-Products during a trade show

...and experience the convenience of our vehicles for yourself

A number of useful trade fairs are scheduled where M--Products will be represented. Our specialists will be delighted to receive you at our stand to show how ease our vehicles are to use, and discuss the various ways in which they can be deployed.

The trade fair agenda can be found further on in this newsletter. In addition, we proudly present our new orange Trike series with a lithium battery, and you can read how our business contact Océan Concepts uses vehicles to keep the streets tidy.

New series: orange Trikes

M-Products is continually working on developing and improving new and existing products. We proudly present you our **new orange Trike series**.

These electric tractors are fitted with lithium batteries, which offers several advantages compared to the conventional Trike series; the lithium battery has a longer lifespan, is 30% lighter, and can be charged at any time. In line with the conventional models, their towing capacity is 250 to 3,500 kg. All our electric tow tractors are designed, developed and produced entirely in-house. It means we can deliver the quality that M-Products represents!

Featured Products

Electric tractors for industry

With a towing capacity of 250 to 3,500 kg, our electric tractors are ideal for moving transport carts and containers. This can relieve employees of unnecessary and heavy physical work. The vehicles in the Trike series are therefore practical and handy tractors for industry.

More info on the uses for electric tractors? Read on [here](#).

Weed control with the BioMant

The HT-1500 is the perfect vehicle to use with the BioMant-Compact machine for professional weed control. The BioMant works with hot water, so no chemicals can seep through to groundwater. Local authorities, green contractors and gardeners use this vehicle to control weeds.

Océan Concepts

Océan Concepts embraced the first Virto model from M-Products right from the outset, and has remained

a loyal customer ever since. This company specialises in electric vehicles designed to keep urban areas clean. The successors (Virto2 and Virto2C) of the very first Virtos can now be found cleaning the roads of Nîmes in France. The vehicles are used to keep the town tidy, and employees enjoy working with them. An excellent way to use Virtos in our view!

Trade fair agenda of M-Products

Interested in finding out which logistics solution suits your situation? A visit to one or more of the trade fairs below would certainly be a good use of your time! Make a note in your agenda. We look forward to seeing you.

LogiMAT | 31 May to 2 June

The Trade Fair Centre in Stuttgart, from 31 May to 2 June, is all about logistics solutions and process management. M-Products will be exhibiting vehicles for internal transport, among other things, at this fair.

Facility & Building Management Trade fair | 8 to 10 June

From 8 to 10 June, we will be exhibiting our solutions for facility departments and building management at Jaarbeurs Utrecht. This will include container transport, minor maintenance, and internal transport solutions.

Zorgtotaal | 14 to 16 June

We have a range of vehicles that can be used in healthcare. We will be putting them in the spotlight during the 'Zorgtotaal' fair from 14 to 16 June at Jaarbeurs Utrecht.

Video: versatile electric tow tractor

The versatile E-Nova is perfect for facility services and public areas such as airports, stations or healthcare.

Colleague Sven recently handed over the key to our partner [Spijkstaal International](#) to confirm the collaboration.

Interested in finding out the advantages of this vehicle? Then read on [here](#), or watch the video.
